

NEW

Smarter, Simpler Bioprocess Feeding – Now Available

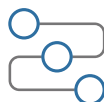

Introducing a streamlined, precision-based approach to feeding your bioprocess systems.

Flownamics' new feeding platform brings together control, flexibility, and scalability, all from a compact, intelligent single use syringe pump design.

Feed Up to Six Reactors from One Stock Solution

Eliminate the need for multiple reservoirs, cut clutter and simplify your setup.

Tailored Manifolds for a Clean, Efficient Workflow

Custom tubing lengths keep your workspace neat and efficient.

Compact, Scalable Syringe Pump Platform

Ideal for both R&D and production-scale processes with accurate, repeatable results.

Exceptional Control for High-Value Feeds

Precisely deliver inducers, nutrients, or perfusion feeds—from microliters to large-volume applications.

Faster Response. Greater Accuracy. No Drift.

Unlike gravimetric systems, our solution isn't impacted by environmental noise like vibrations or airflow.

Seamless Integration

Easily connects to your current bioreactor platform and supports both manual and automated control.

Whether you're scaling up or dialing in precision for R&D, this system delivers consistent, reliable performance without the complexity.

Plug-and-Play Flexibility

No recalibration. No sensitive placements. True location flexibility in any lab environment.

**Smarter Design. More Control.
Precise Delivery.**
